SYSTEMIC THERAPY FOR M1 CRPC: ADENOCARCINOMA WITH VISCERAL METASTASES<sup>xx,xxx</sup>

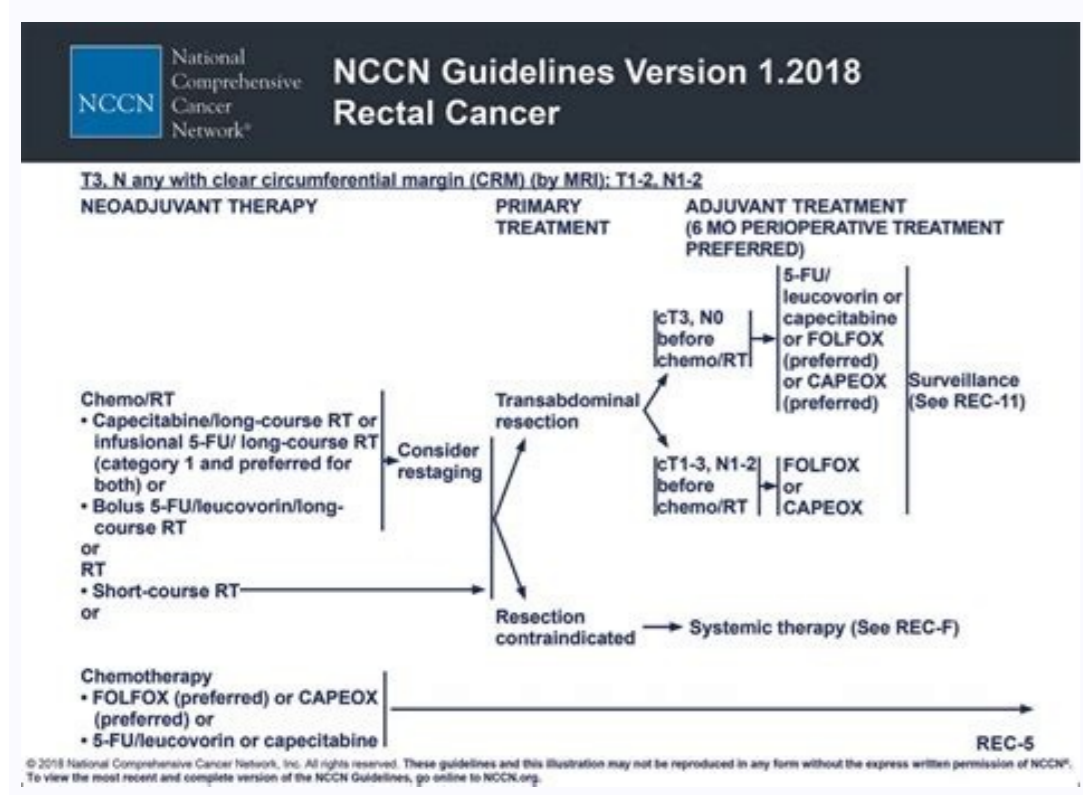

<sup>xx</sup> See Principles of Androgen Deprivation Therapy (PROS-F).  
<sup>xxx</sup> See Principles of Immunotherapy and Chemotherapy (PROS-G).  
<sup>xx</sup> Visceral metastases refers to liver, lung, adrenal, peritoneal, and brain metastases. Soft tissue/lymph node sites are not considered visceral metastases.  
<sup>xxx</sup> Patients can continue through all treatment options listed. Best supportive care is always an appropriate option.  
<sup>xx</sup> Consider AR-V7 testing to help guide selection of therapy. (See Discussion).  
<sup>xx</sup> Workup for progression should include chest CT, bone imaging, and abdominal/pelvic CT or abdominal/pelvic MRI with and without contrast. Consider metastatic lesion biopsy. See Principles of Imaging (PROS-B) and Discussion.  
<sup>xx</sup> Patients who received docetaxel with ADT in the metastatic castration-naïve setting can be considered for docetaxel rechallenge in the CRPC setting.  
<sup>xxx</sup> Mitoxantrone with prednisone is for palliation in symptomatic patients who cannot tolerate other therapies.  
<sup>xx</sup> Patients treated with systemic therapy for non-visceral metastases (see PROS-17) should proceed to a different subsequent therapy for patients with visceral metastases based on their previous treatment. If small cell neuroendocrine is found, see PROS-16.
